

# BODI

## Your Best Defense Against Data Theft

Bodi is a complete end-point security platform encompassing:

---

### **Phishing Prevention**

Prevents users from accidentally clicking on a malicious link stopping malware in its tracks irrespective of the vector – email, Skype, attachments, websites, Slack, etc.

### **Insider Threat Detection**

Stop data theft with real-time alerts based on defined keywords, file actions, special formats such as SSN or credit card number, and unauthorized privilege changes.

### **Usage Analysis**

Detailed analysis of application usage, web browsing, printing, etc. as well as time and length of usage.

### **Forensic Evidence**

Full recording and keyword searching of each device in case you need to review and analyze an incident.

### **Remediation**

Full remote control capabilities of the end-point to correct device related issues.

### **Integration**

The Pilixo REST API lets you integrate with Bodi using simple HTTP methods in JSON format. Our API allows for streamlined development of Bodi features into your existing tools.

Ways to use Bodi:

---

- ✓ **Stop phishing attacks from any source**
- ✓ **Identify excessive Internet usage**
- ✓ **Track who accessed confidential data and when**
- ✓ **See which apps are used most often**
- ✓ **Keep a record of documents printed**
- ✓ **Monitor web activity and chats**
- ✓ **Receive an alert for unauthorized privilege changes**
- ✓ **Learn business hour and non-business hour trends**
- ✓ **Meet strict compliance requirements**

# Stop Cyber Threats with Cloud-Based End-Point Monitoring Software

## Deter Insider Threats and Improve Data Security to Meet Strict Compliance Requirements.

A data breach can happen to any company, at anytime. Whether it's a malicious attacker, a disgruntled former employee or a careless insider, no organization is immune.

That's why you need end-point monitoring. Bodi is cloud-based software that sends you real-time alerts for unusual computer activity. It also continuously records HD video for playback to help reduce audit costs and allows for remote access to improve support times.

## Why You Need End-Point Monitoring:

### The Insider Threat

At any given moment, any protected system can be infiltrated, potentially compromising a company's confidential information, damaging its brand, and imposing the costly expense of a forensic investigation. As hackers get more innovative with their tactics, companies must become more proactive in their practices. The first step in protecting your company data is to identify the existing security gaps and become aware of all potential threats, particularly those that occur from the inside. No employee is above suspicion. No organization is immune to a security breach.

## Your Online Intelligence Service

**Resolve issues by taking control of an end-point with our Remo product which is included with Bodi.**

Far more powerful than simple keylogger software, Bodi runs in the background on every PC you want to monitor. You simply set up alerts for actions that are outside of your company policies and Bodi goes to work. Should an employee take actions that violate protocol, a real-time alert is triggered to ensure you can take action immediately.
